## Breath of fresh air

**SPEAKING OF CLEAN** air, results from the Beijing University of Technology recently showed that Oxyvital air purifiers are 100 percent efficient in removing airborne viruses including H5N1 (swine flu), H1N1 (bird flu) and SARS after 120 minutes.

The study was conducted by the university's College of Life Science and Bio-Medical Engineering and endorsed by leading virologist Zeng Yi.

The scientists found that Oxyvital air purifiers have a one-pass or first-pass viral disinfection rate of 99.93 percent. So for every cycle of air that passes through, 99.93 percent of the airborne viruses are reduced per cycle.

Each cycle takes about 12 seconds.

For home use, Oxyvital has split-unit air purifiers that can clean between 1,000 and 3,000 square feet of living area.

Prices start from HK\$24,000 including installation.
